

## Architectural Drafting

For Architectural Drafting, the written test will be general in nature and will relate to general residential construction and architectural drafting for the most part. The Skills technical standards lists several topics on geometric shapes and how they relate to architecture. There will be no questions addressing this. Knowing the various geometric shapes is adequate. There will be minimal calculations, but a few that will make them think a bit. The written test is only 50 points. In my mind being able to make an 11x17 pdf to a correct scale is more important.
