

# HVACR

The only tools they will need would be their hand tools, typical hand tools required to run a service call, refrigeration gauges and a torch kit.

All our wiring would be internal to the machine. Each furnace will have a wiring schematic on the panel. I would say if they practiced a fundamental working knowledge of a basic circuit with a load, step down transformer primary and low voltage, they should be golden. Something like the schematic below. if the photo is too blurry just google Goodman furnace wiring diagram and you should see plenty of examples.
